NATIONAL LEVEL WORKSHOP
ON BUILDING APPLICATIONS WITH AI AND ESSENTIAL TOOLS
(In association with AICTE and Brain O Vision)

This workshop is designed to empower students and faculty with practical skills in AI-driven application development, leveraging cutting-edge tools from Google and Microsoft (Excel).

About the Program:

Why Join This Workshop?

-  *Hands-on Learning*: Build real-time applications using AI
-  *Master Essential Tools*: Learn Google tools & Excel for enhanced productivity
-  *Practical Industry-Relevant Skills*: Gain insights into AI-powered solutions
-  *No Prior Experience Required*: Open to all students and faculty
-  Certification Upon Completion

Program Details:

-  *Dates*: April 28th – May 2nd, 2025
-  *Time*: 7:00 PM – 8:00 PM (Daily)
-  *Mode*: Virtual (Hands-on Sessions)

What Will You Learn?

- ◆ AI-powered application development
- ◆ Google Sheets, Docs, Forms, and other essential productivity tools
- ◆ Advanced Microsoft Excel functions for data analysis
- ◆ Real-world project building and implementation

DAY 1. AI-Powered Application Development for Innovation

- AI enables smarter and more efficient application development, reducing manual coding efforts.
- AI-driven automation enhances functionality, such as predictive analytics, chatbots, and intelligent data processing in applications.

DAY 2. Google & Microsoft Tools for Real-World Efficiency

- Google Sheets, Docs, and Forms streamline collaboration, automation, and data management, making them essential for academic and professional use.
- Microsoft Excel is a crucial tool for data analysis, reporting, and decision-making, widely used across industries.

DAY 3. Low-Code/No-Code Approach for Broader Accessibility

- Not everyone has a deep coding background—integrating AI with low-code tools allows participants to develop applications without extensive programming knowledge.
- This empowers students, faculty, and professionals to create AI-powered solutions with minimal technical barriers.

DAY 4. Industry-Relevant Skills for Career Growth

- AI, data management, and automation are in high demand across industries.
- Learning these skills helps participants stay competitive in the job market and adapt to evolving technologies.

DAY 5. Practical, Hands-on Learning for Immediate Application

- Combining these tools offers a well-rounded, project-based learning experience where participants can immediately apply their knowledge to real-world scenarios.
- This approach ensures high engagement and retention while preparing participants for modern work environments.
